Dear Mike,

Enclosed is the map of the Far West Mine disturbed area. The proposed new channel for the stream is marked in blue. This is an intermittent stream, having water in it only during the spring. We would like to rechannel it to allow us to dump more developmental rock. An earthen dam approximately 2 feet high will be placed upstream to divert the runoff into the new channel. It will not be necessary to dig a new channel. The new channel is an existing secondary channel presently. As you will notice, it will not be necessary to permit additional acreage for this proposed change.

Thank you for your assistance.

Sincerely,

Dean Roberts
